EDUCATION

University of North Carolina

Chapel Hill, NC

Bachelor of Science in Computer Science and Economics, Minor in History

Expected May 2027

- **GPA:** 3.73
- **Coursework:** Data Science and Econometrics, Data Structures & Algorithms, Artificial Intelligence, Modern Web Programming, Files and Databases, Foundations of Software Engineering

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C, C++

Frameworks and Libraries: React, Spring Boot, Flask, Next.js, FastAPI, SQLAlchemy, scikit-learn, Pandas, NumPy

Tools and Platforms: PostgreSQL, AWS, Supabase, Node.js, Docker, Git, Linux/Unix, Kubernetes, CI/CD

EXPERIENCE

Software Engineering Intern

May 2026 – Present

SAS Institute

Cary, NC

- Co-developed a **Python** testing framework and designed its test-state architecture for automated SAS validation, now being evaluated for implementation into a **SAS-wide framework** serving **hundreds** of developers.
- Migrated **50** legacy validation tests to assertion-based **Python/pytest** tests, uncovering false-positive passes identified in over **10%** of migrations while improving defect isolation and regression reliability.
- Developed a **RAG-powered multi-agent pipeline** to retrieve project context, infer legacy test intent, generate Python test ports, and automatically validate outputs against framework requirements.
- Engineered a **Python** test orchestration controller to parallelize independent regression workloads across SAS Compute Servers, reducing runtime by **50%** and enabling concurrent workload testing against SAS Data Agent.

Building Team Member, Software Development

Jan. 2026 – May 2026

Chapel Thrill Escapes

Chapel Hill, NC

- Shipped a full-stack **Python/React** puzzle with real-time event handling, used by **300+** **players** in production.
- Developed a **Python** pipeline to ingest gameplay data and automatically generate post-game analytics reports.

Program Specialist

Feb. 2024 – Present

BeAM Makerspace

Chapel Hill, NC

- Supported **hundreds** of patron engineering projects by troubleshooting hardware/software failures and training users on fabrication equipment.

PROJECTS

Big/Little Program Platform | *Python, FastAPI, React, PostgreSQL, Supabase* | [Project Link](#)

- Developed a **FastAPI/React/PostgreSQL** platform for **50+** **users** and **100+** **submissions**, with image proof, admin review workflows, and live leaderboards.
- Implemented role-based authorization and organization-scoped REST APIs using **SQLAlchemy, Supabase Auth, and PostgreSQL**.

Property Management Application | *TypeScript, React, Next.js, PostgreSQL* | [Project Link](#)

- Built Commune, a multi-tenant housing platform using **Next.js, TypeScript, tRPC, Supabase/PostgreSQL, and Drizzle ORM**, with role-based access and unit-scoped data models.
- Engineered ticket and messaging workflows with **tRPC and PostgreSQL**, enforcing role- and unit-scoped access while supporting real-time updates and paginated messaging.

LinguaCV, SteelHacks 2025 | *Python, Flask, REST APIs, Vapi* | [Demo](#)

- Built a **Flask REST API** connecting a Spanish-speaking AI agent to a React client, normalizing conversational inputs and **AI-generated JSON** into structured resume data.

LEADERSHIP

UNC Sangam | *President*

- Led a **20+** **member executive board** in planning and executing events for **1,000+** **attendees**, managing **\$7K+** **budgets**, logistics, vendor coordination, and task delegation.
